Abstract

DigiClass is a file sharing system where a teacher will upload a PDF files using unique code to identify the file, and Students can then download the file using the unique identification code. Student can also view the PDF file content in the application as well. Once the File is downloaded into the local internal storage of the student device then student can listen to audio of the PDF file content. The audio is converted from the PDF file contents, which is converted from text to speech. Using this app teacher can share the documents instantly to students using subject code. Student can view the documents study and text to speech can be converted.
